Packages & R code

Jan 2019

Charlotte Wickham

@cvwickham cwickham@gmail.com cwick.co.nz

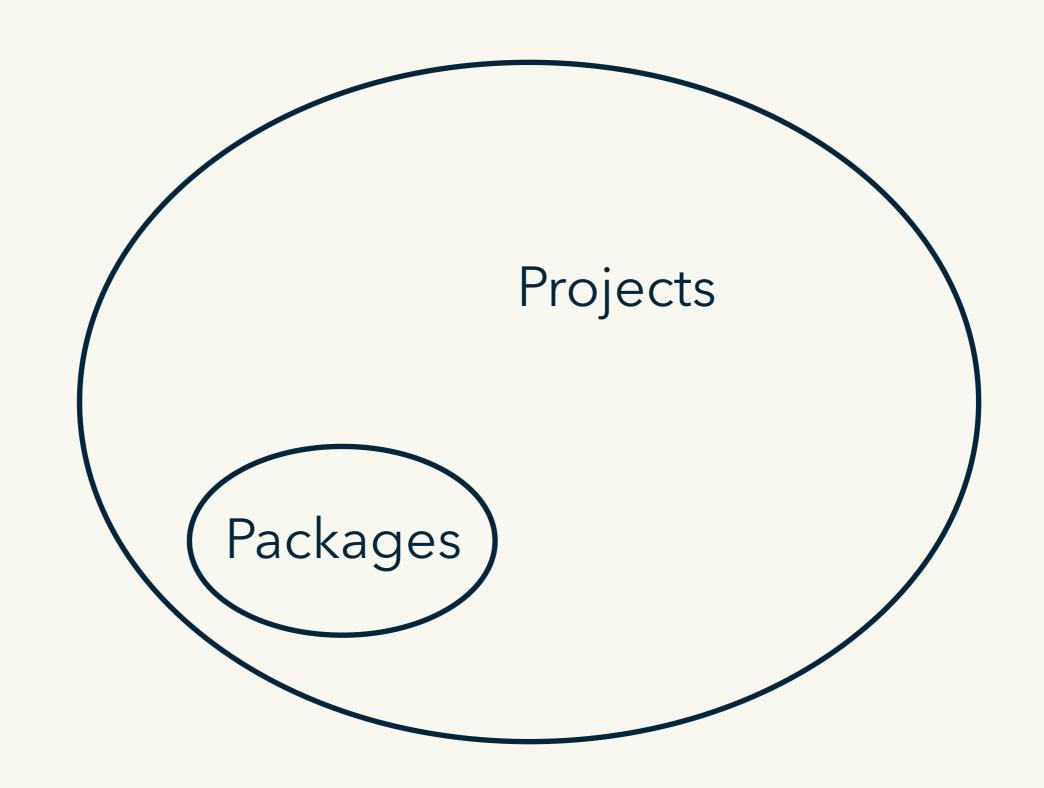

Motivation

A package is a set of conventions that (with the right tools) makes your life easier

"Seriously, it doesn't have to be about sharing your code (although that is an added benefit!). It is about saving yourself time."

Hilary Parker

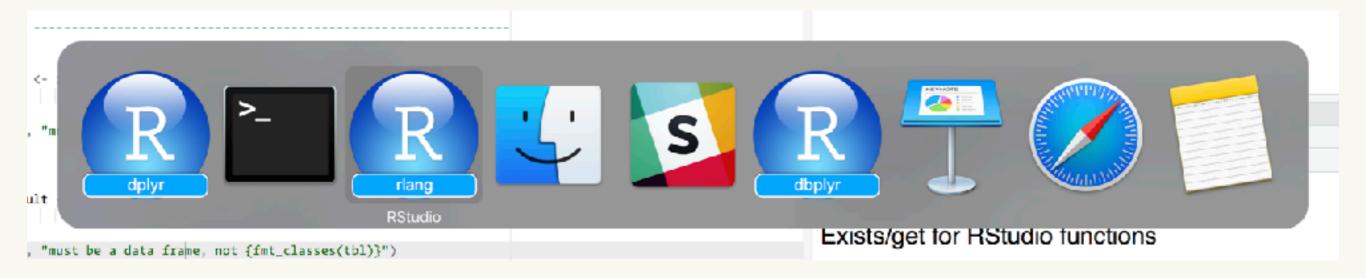

RStudio projects

Why use RStudio projects?

3 reasons

Multiple RStudio sessions

Work on multiple projects simultaneously and independently

Manage working directories

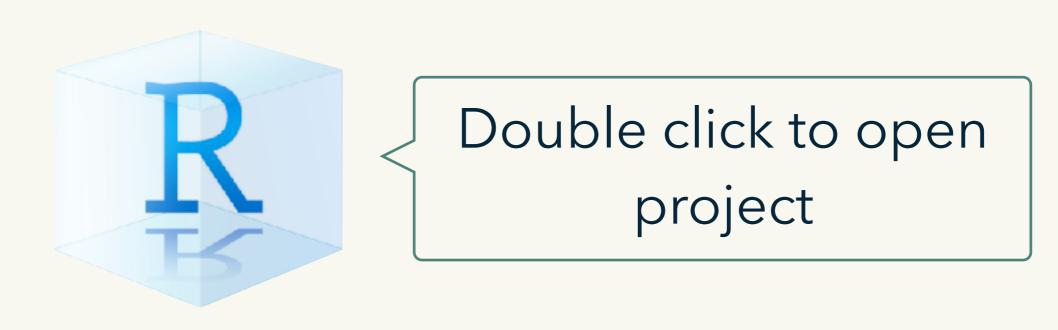

If the first line of your R script is setwd("C:\path\that\only\I\have")

I will come into your office and SET YOUR COMPUTER ON FIRE .

Jenny Bryan

https://www.tidyverse.org/articles/2017/12/workflow-vs-script/

Manage working directories

mylittlepony.Rproj

Enhanced navigation

Ctrl + . = find functions/files

```
~/Documents/tidyverse/stringr - master - RStudio
                                                  # - EG - Addins -
                       Co to File/Function
© replace.r × 63 unname
Caro
                           str_replace_all (R/replace.r)
  58 #1 x <- c(
     #' "Roses are red, violets are blue",
     #' "My favourite colour is green"
  61 #' )
  62 #' str replace all(x, colours, col2hex)
  63 - str replace <- function(string, pattern, replacement) {
  64 * if (!missing(replacement) && is.function(replacement)) {
  65
          return(str_transform(string, pattern, replacement))

```

F2 = jump to definition

My first package

package.skeleton()

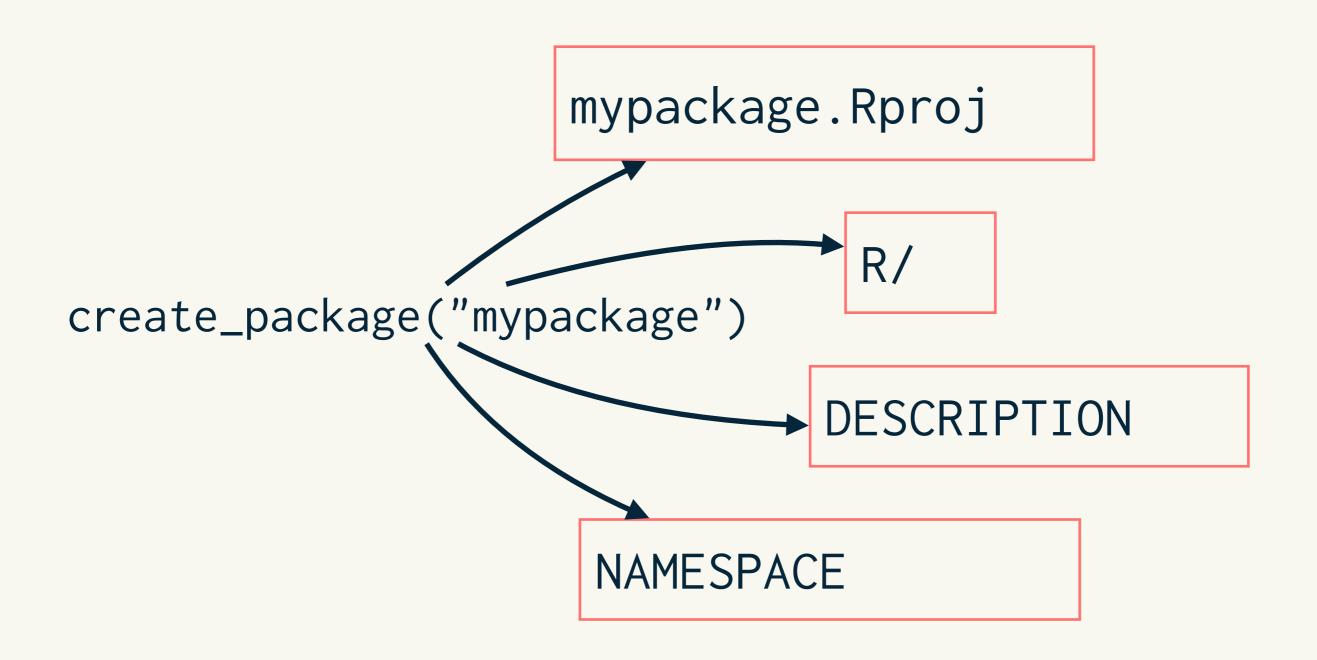

Never use this!

Your turn

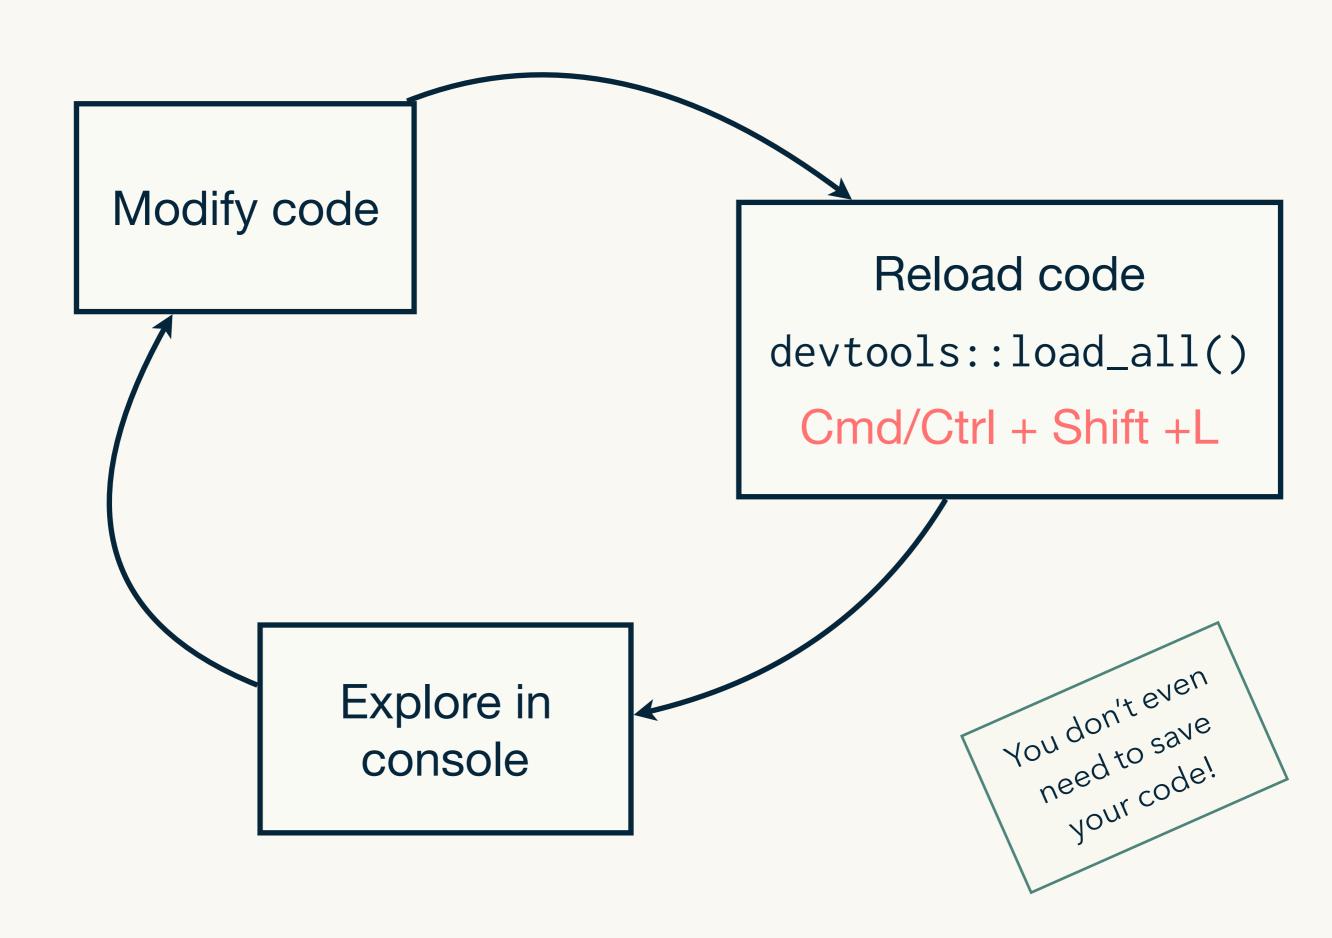

What files and directories are created?

```
# You can also create new project using RStudio
# but it has some slight differences that will
# cause friction today (but not in general)
```

What happens when we run create_package()?

Why bother? Improved workflow

Change project to:

[mylittlepony]

mylittlepony/

mylittlepony.Rproj < Double click to open

Your turn

Jump to rpony() using only the keyboard.

Load all the functions (using a keyboard shortcut), then run rpony(10).

Uhoh! I have forgotten to include Fluttershy in the list of ponies. Add her, reload the code, and verify that your change worked.

What if you need to create a new file?

```
# There's a usethis helper for that too!
usethis::use_r("file-name")

# Organise files so that related code
# lives together. If you can give a file
# a concise and informative name, it's
# probably about right
```

Your turn

Use usethis::use_r("show") to create a new file

Add a function that prints all ponies in alphabetical order.

Practice using the keyboard shortcuts.

R/RStudio setup

Workflow setup: your .Rprofile

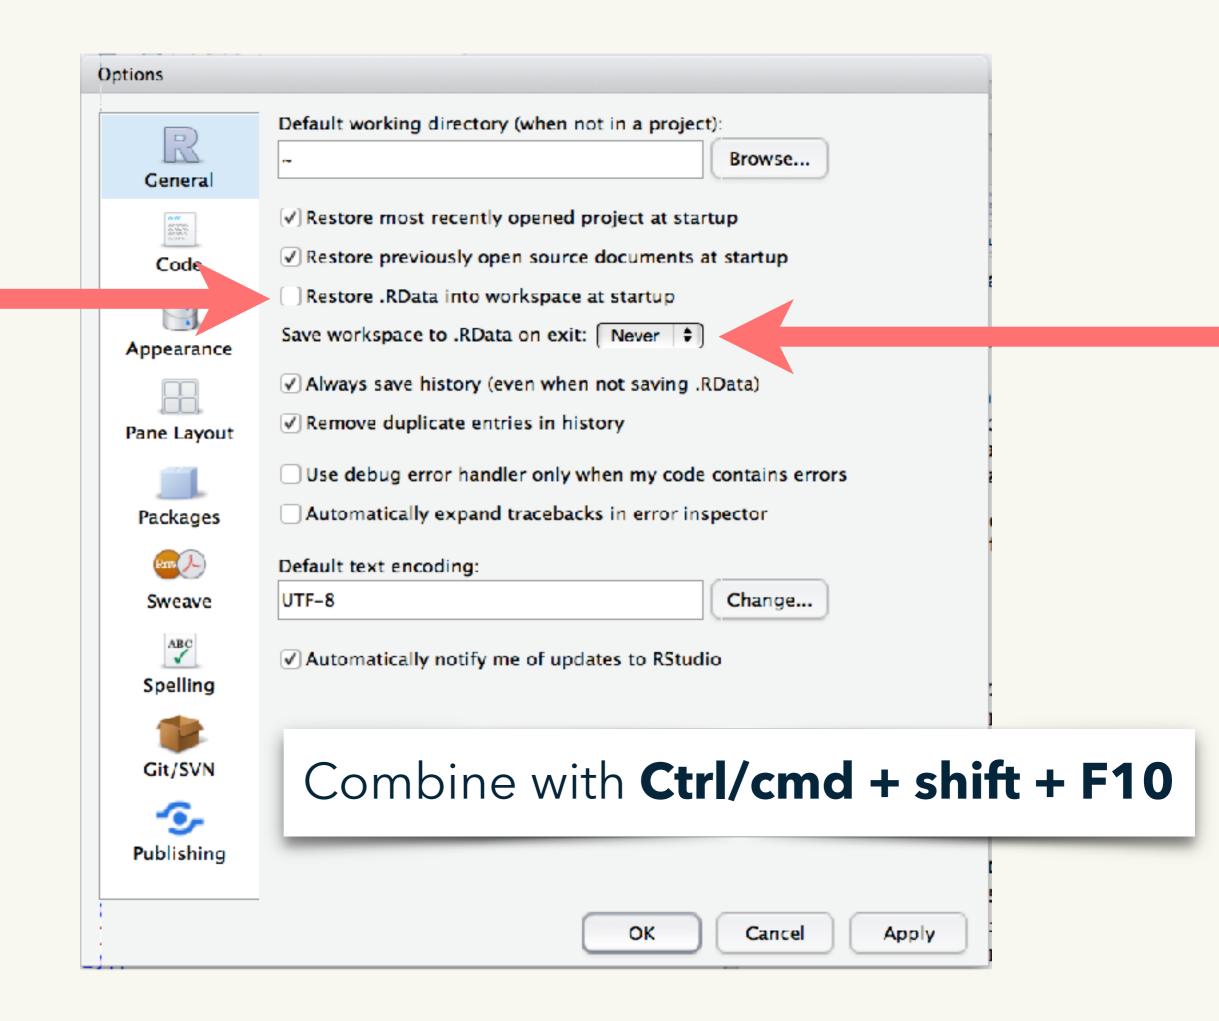

```
# Setup some code that is run every time
# you start R: usethis::edit_r_profile()
if (interactive()) {
  suppressMessages(require(devtools))
  suppressMessages(require(usethis))
  suppressMessages(require(testthat))
```

Never include analysis packages here

```
if (interactive()) {
   suppressMessages(require(ggplot2))
   suppressMessages(require(dplyr))
}
```

While you're in there, also add

```
options(
  warnPartialMatchArgs = TRUE,
  warnPartialMatchDollar = TRUE,
  warnPartialMatchAttr = TRUE
)
```

Your turn

Follow the instructions in previous slides and make sure that you're optimally configured.

Read https://www.tidyverse.org/ articles/2017/12/workflow-vs-script/ for more justification/motivation
